

java::util::HashMap
< String, EventHandler >

```
classDiagram
    class java_util_HashMap["java::util::HashMap<String, EventHandler>"]
    class basicServer_HandleMap["basicServer.HandleMap"]
    basicServer_HandleMap --|> java_util_HashMap
```

The diagram consists of two class boxes. The top box, representing the superclass, is divided into three horizontal sections. The first section contains the text 'java::util::HashMap' followed by a generic type declaration '< String, EventHandler >'. The second and third sections are empty. The bottom box, representing the subclass, is also divided into three horizontal sections. The top section contains the text 'basicServer.HandleMap'. The middle section contains the text '- serialVersionUID'. The bottom section is empty. A blue arrow with an open triangular head points from the top of the subclass box to the bottom of the superclass box, indicating an inheritance relationship.

basicServer.HandleMap

- serialVersionUID
